

AlphaVision[®]

A new view of reproduction

Secure assisted
insemination

Diagnosis and
reproduction management

Comfort of use and animal
well-being

Imaging is used in animal insemination

The world leader in reproductive biotechnologies, IMV Technologies, has modernized animal insemination with AlphaVision.

This insemination gun features a miniaturized, high-definition, waterproof, illuminating camera used to view the cervix.

The image is transmitted to a smartphone or BUG viewing devices and tablets.

This major innovation, which instantly displays the cervix, makes it easier to perform the act of insemination, especially on cows that are difficult to inseminate.

This endoscopic function also allows an early visual diagnosis of any clinical anomaly. It can, for instance, be used to monitor uterine involution and detect early metritis. The case contains a treatment sheath to facilitate the application of the treatment.

For optimized reproduction at all stages

1 Uterine involution

No gestation
without correct uterine involution!

Uterine involution: the moment when the uterus returns to its normal size and weight after calving.

After calving, around 30 days are necessary to obtain full uterine involution.

A delay can have a strong impact: up to **-20%** on the success rate.

Proper CERVICAL involution

CERVICAL involution under way

2 Detection of metritis

Undiagnosed METRITIS
cause a decrease in fertility.

	Without endometritis	Endometritis
Conception on first breeding	45.7%	38.5%

1600 cows, Australia

MILD metritis

MILD metritis

Making an early diagnosis

AlphaVision allows the early detection of gynecological anomalies: bleeding, malformation of the cervix, infections such as metritis, etc. as well as speedy treatment of these problems. AlphaVision makes it possible to capture images and confirm a diagnosis remotely.

3 Detection of abnormalities

Importance of detecting ABNORMALITIES
for decision-making.

Membrane

➡ Insemination possible and facilitated with AlphaVision

Double cervix

Cysts

➡ Insemination possible

Urovagina

➡ Insemination not advised

4 Detection of heats and insemination

The ability to be 100% sure
if a cow is in HEAT!

In heat,
because mucus present

In heat, vascularization
of the vaginal wall

Not in heat,
no mucus present

➔ Insemination possible and facilitated with AlphaVision

➔ Insemination not advised

- Confirm that the cow is ready to be inseminated
- Facilitating secure insemination
- Ensure technician comfort and animal well-being
- Save time in complete safety

“

Testimonial

The AlphaVision is used for **post-calving monitoring** to **detect metritis and uterine involution**. 15-day, 30-day, 40-day checks. On a cow with metritis, antibiotic treatments are made using a **treatment sheath**. When I see that there is no metritis and that the involution is complete, the cows can be bred at 40 days.

When you are away, someone else can inseminate with AlphaVision. The cow does not move at all, it does not **hurt her**. The advantage is that it has a soft plastic tip. AlphaVision is much easier to handle because **there are no more wires and it is easier to assemble**.

On the application you can write the number of the cow, if the involution is completed, if there are metritis or anomalies other than metritis. **All traceability information is saved on your phone**. For the whole herd, we went **from 420 days between calving to 365 days**.”

TECHNICAL SPECIFICATIONS

AlphaVision

- High quality definition
- Wifi connection (no network required on the farm)
- Quick assembly
- Handy, ergonomic
- Sanitary liner and clippable speculum for easy cleaning
- Metal applicator included for easy treatment
- Compatible with smartphone or bugs viewing device or tablet
- Traceability of photos and biological data of the cow through the application

AlphaVision case Ref.AV2-SYSTEM-01

Included

- **1 AlphaVision system** with high-definition waterproof miniature camera
- **2 speculum units**, with and without soft tip
- **2 extensions** for attachment to the Kombicolor insemination gun (MEC09-015)
- **2 Kombicolor insemination guns**
- Ref. 018398/018400
- **50 Alpha sheaths** - Ref. 024485
- **1 straw cutter** - Ref. 005233
- **1 bottle of B-LUBE gel** - Ref. 023917
- **150 sanitary shirts** - Ref. 029401
- **1 treatment sheath** - Ref.ACC-OPTISOIN-AV
- **1 charger** for the AlphaVision battery
- Ref.ESG-CHARGER
- **2 batteries** - Ref.ESG-BATT
- **1 transport case** - Ref. PAK15041

Options

- Glasses Ref. BUG-VGA:GO
- Telephone holder Ref. ACC-CHEST HARNESS
- Belt Ref. ACC-BELT-AV
